MODEL PRACTICAL EXAM
CS8711 Cloud Computing Laboratory

Name : Vaishali. R

Reg. No : 312217104181

Sem : 7

20. Install virtual machine (Ubuntu desktop), run a sample Java program.

Aim:

To install a virtual machine ~~box~~ (Ubuntu Desktop) and run a sample Java program

Procedure:

- i) Download ubuntu 16.04.07 iso image (64-bit)
- ii) Create a new vm in virtual box with type as linux and version as Ubuntu 64-bit
- iii) Allocate 1024 MB for RAM and create a virtual hard disk using the downloaded disk image. Set the hard disk size to 10GB.
- iv) The vm is created. Now start the vm and install ubuntu.
- v) Install JDK using the command
"sudo apt install default-jdk"
- vi) Install JRE using the command
"sudo apt install default-jre"

viii) Write a simple JAVA program and save it as Hello.java

ix) Check java version using "java -version"

x) Compile and execute Hello.java

· javac hello.java

· java hello

Result :

Thus an Ubuntu 16.04.07 Desktop vm has been created and a java program has been ~~installed~~ executed.

MODEL PRACTICAL EXAM

NAME: VAISHALI R

REG.NO:312217104181

20) Install VM (Ubuntu desktop), run a simple java program

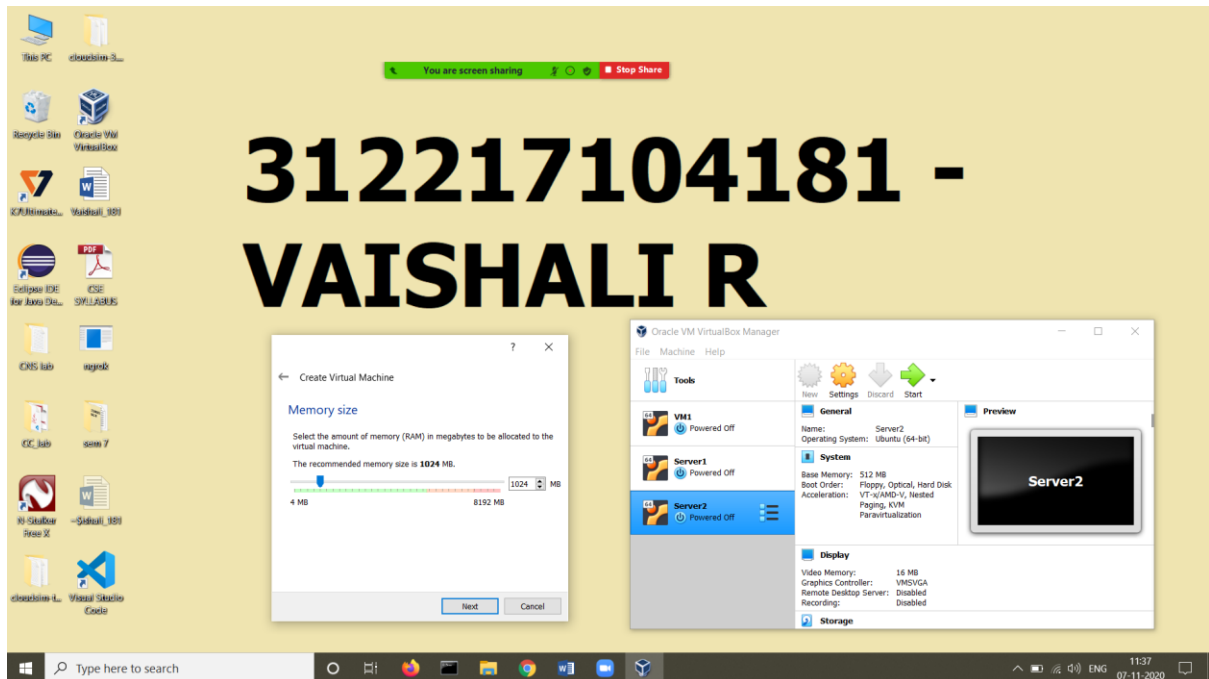

Output Screenshots:

- 1) Create a VM with type as Linux and version as 64 bit using Ubuntu 16.04.07 iso image.

Name of VM: Vaishali-181

2) Allocate 1024 MB RAM

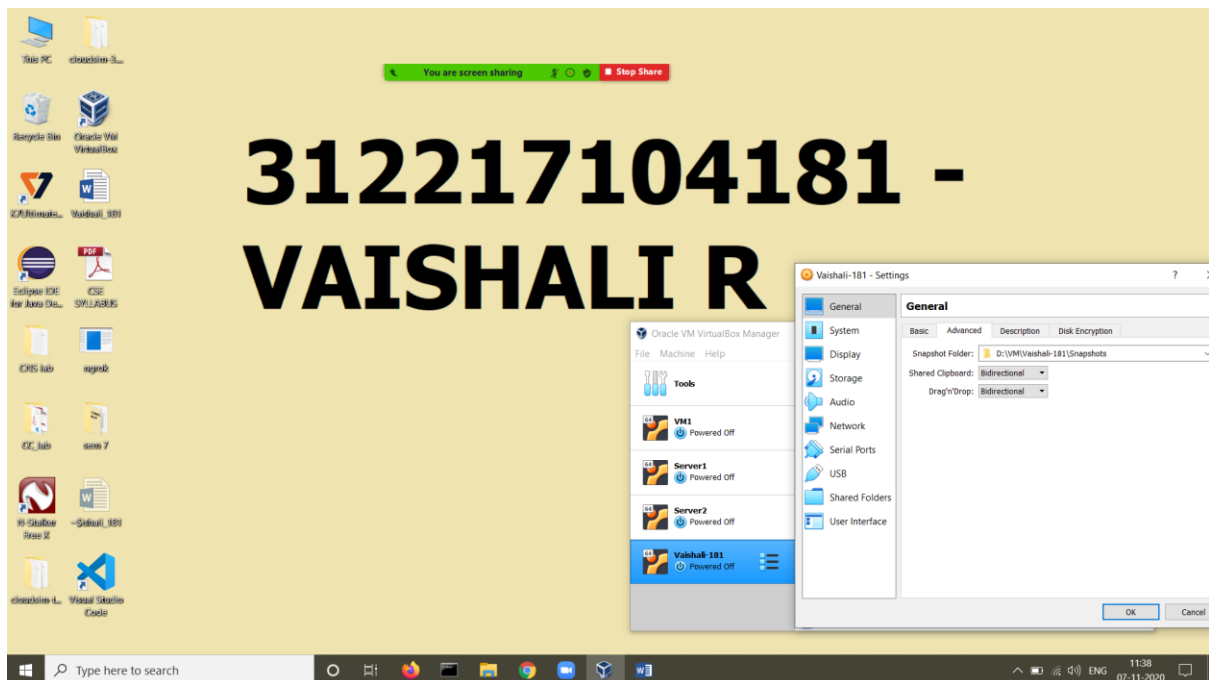

3) Create virtual hard disk of size 10 GB using disk image

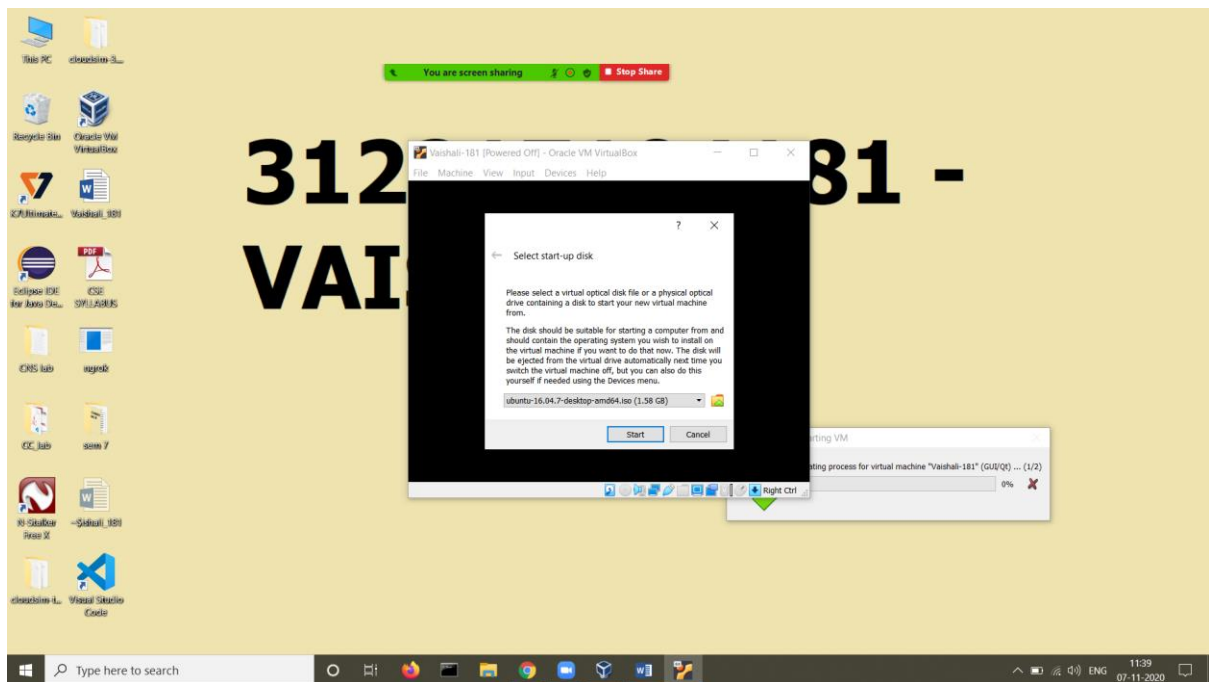

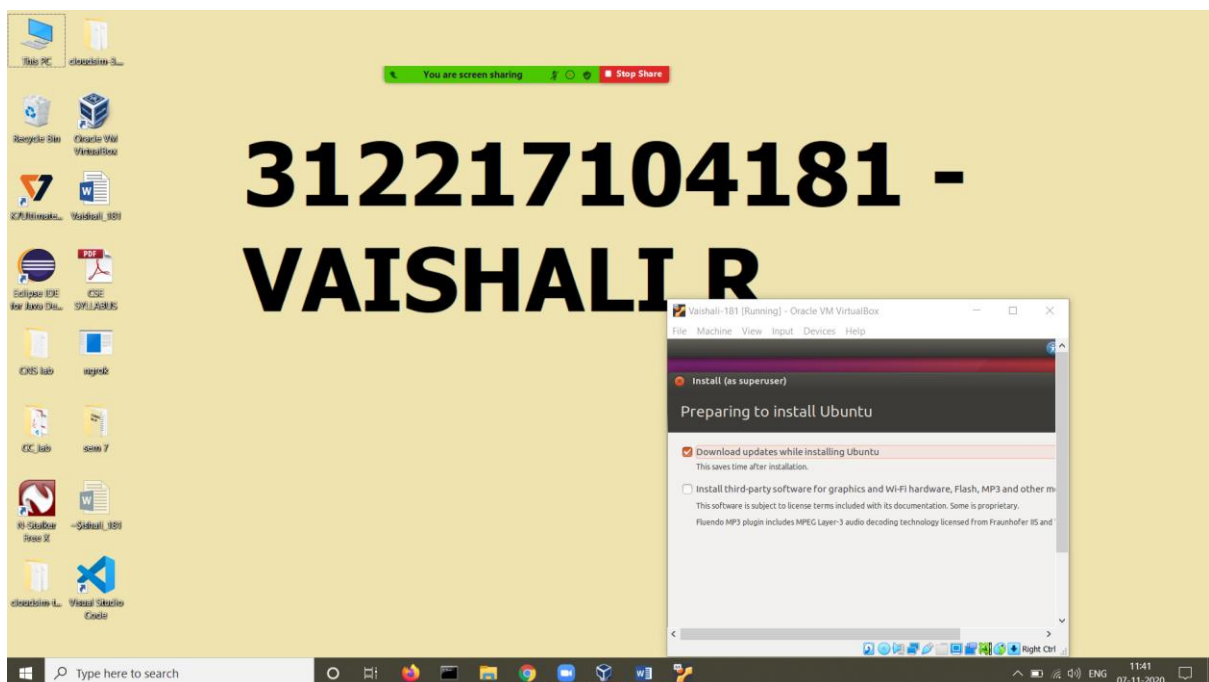

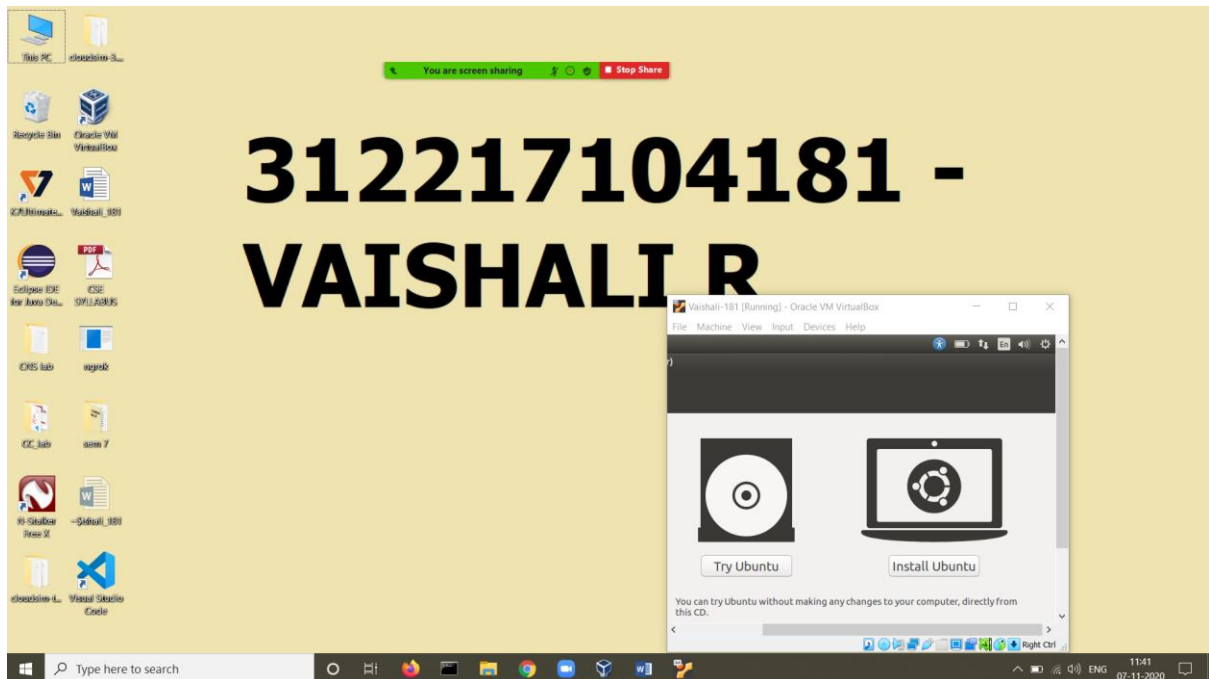

- 4) Now VM has been created, change the clipboard and drag 'n drop settings to biirectional

- 5) Select the corresponding iso image

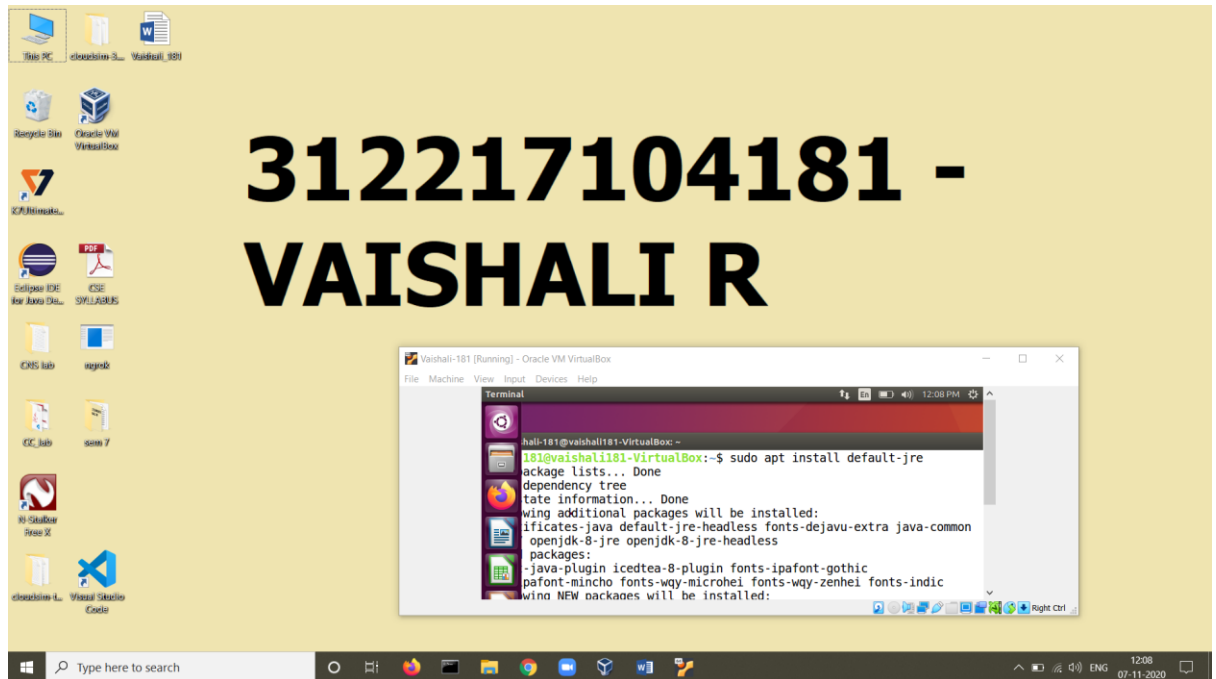

6) Follow the instructions and install ubuntu

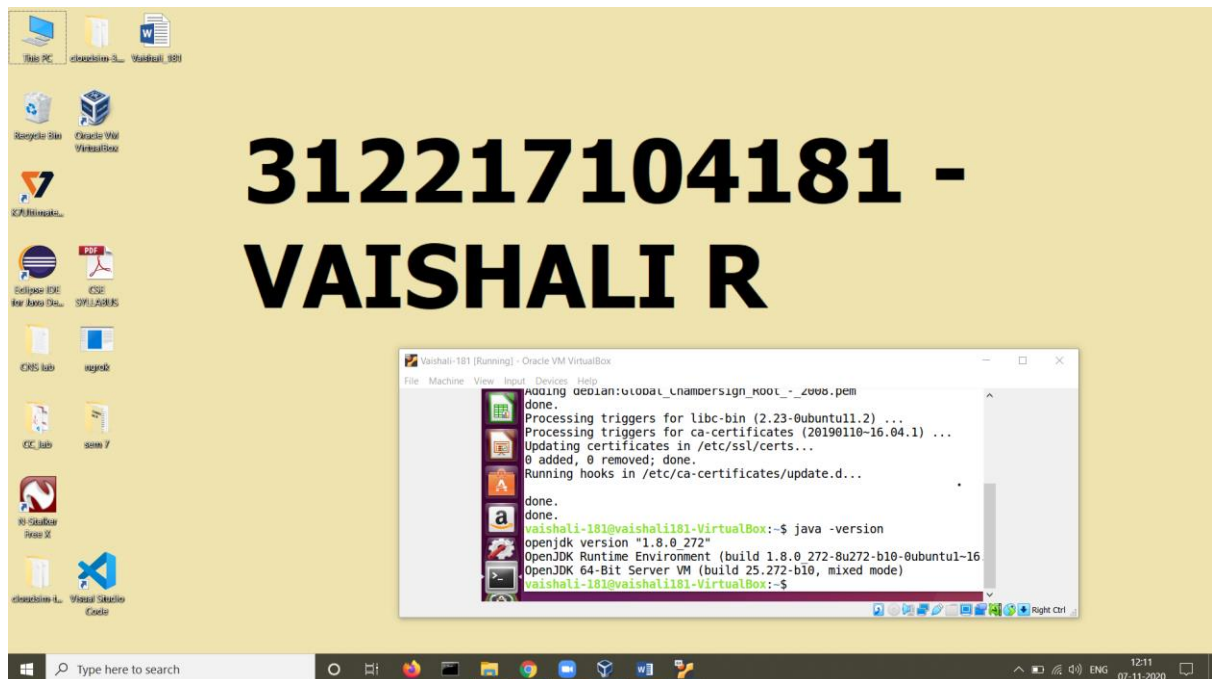

7) Set username (Vaishali-181) and password

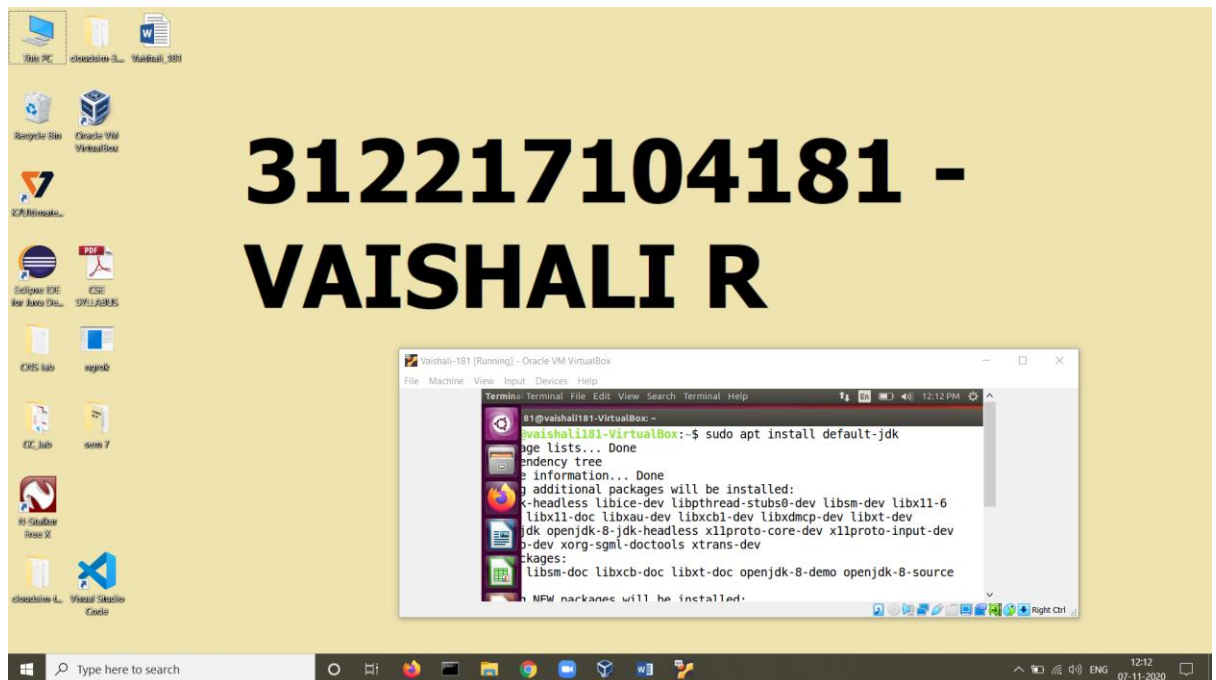

8) Install JRE using “sudo apt install default-jre”

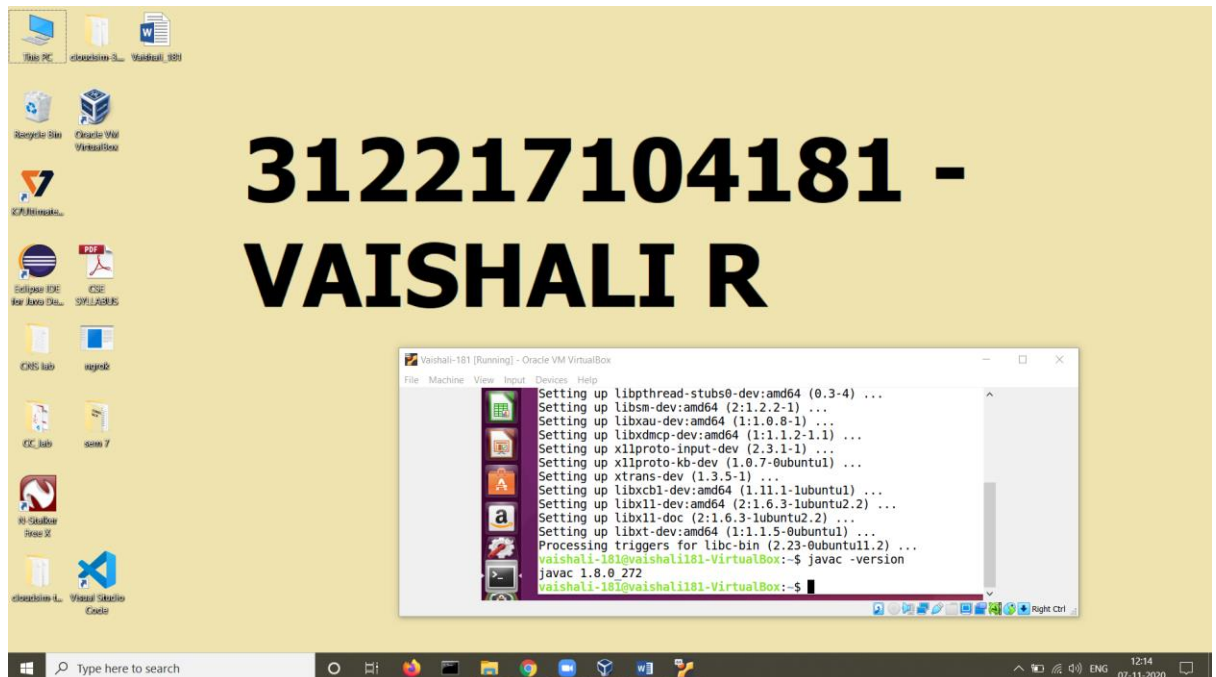

Check version using java -version

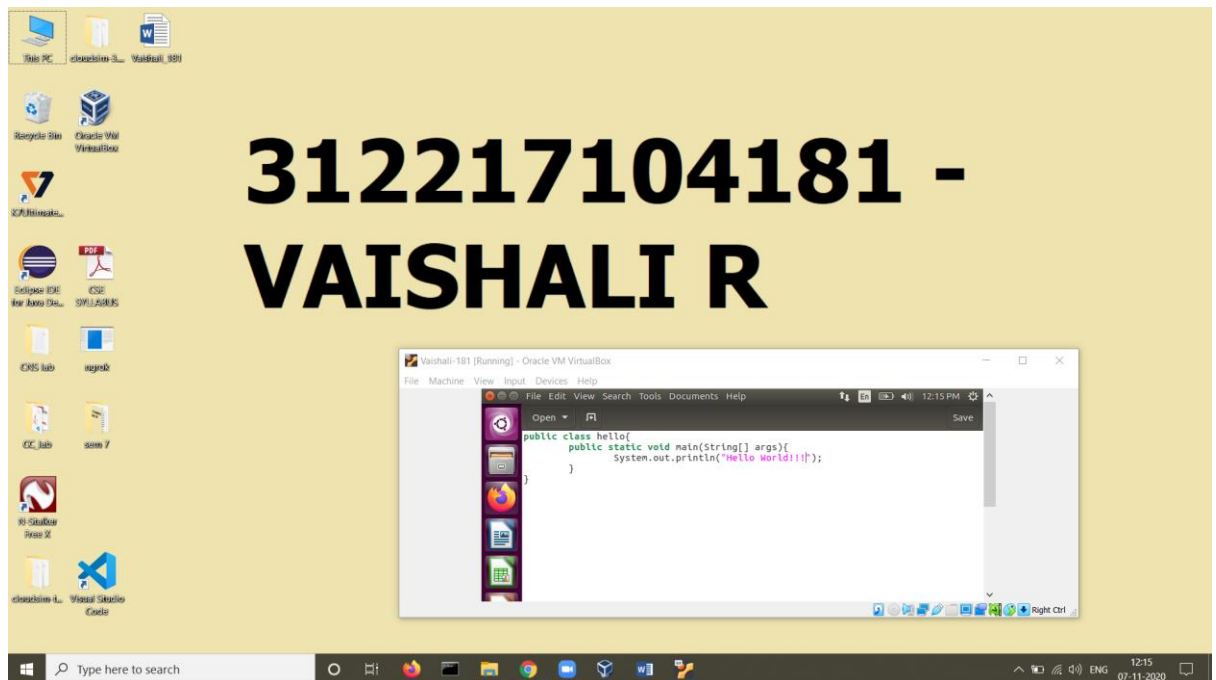

9) Install JDK using “sudo apt install default-jdk”

Check version using javac -version

10) Write a simple JAVA program “hello.java”

11) Compile and execute hello.java
